from curro. students. maths_marks;

Grade
10
11

SQL filtering statement

WHERE Statement

- allows us to specify conditions in order to filter rows in our table
- we are filtering the rows

*NB# we filter the columns using the select statement

We filter the rows using the WHERE statement

* Syntax: SELECT column1,
column2,
column3,
column4

from database.schema.table
where ~~condition~~
condition;

*NB curro. students. marks

database

schema

table

Students ID	Name	subject	marks
101	KG	maths	99%
102	Mbali	maths	22%
103	Ishepo	Geo	50%
104	Lesego	Bio	40%

* show students who got less than 50%
name & marks

```
SELECT name,
        marks
FROM    curro.students.marks
WHERE   marks < 50;
```

Name	Marks
Mbali	22%
Lesego	40%

* SQL script for to give student-id, name
and marks of students who got above 50

```
SELECT student-id,
        name,
        marks
FROM    curro.students.marks
WHERE   marks > 50;
```

student-id	name	marks
101	KG	99%
